#### II. FISCAL YEAR AND CURRENCY USED IN ACCOUNTING

- 1. Accounting period: Begins on January 1 and ends on December 31 each year.
- 2. Currency used for bookkeeping, financial statement preparation, and presentation: VND.

#### III. ACCOUNTING STANDARDS AND APPLICABLE ACCOUNTING SYSTEM

- 1. Accounting system applied: The company applies the Vietnamese enterprise accounting system issued under Circular 200/TT-BTC dated December 22, 2014
- 2. Declaration of compliance with accounting standards and accounting system:

We, Hai Agrochem Joint Stock Company, declare compliance with the Vietnamese accounting standards and accounting system issued by the Ministry of Finance, suitable for the company's business operations.

#### IV. APPLIED ACCOUNTING POLICIES

The following are the primary accounting principles applied by the company in the preparation of the Financial statements:

#### 4.1. Exchange rates used in accounting

#### a. Principles for determining the actual exchange rate:

- The actual exchange rate for foreign currency transactions arising during the period:
- + The exchange rate for foreign currency purchases and sales is the rate specified in the foreign exchange purchase and sale contract between the enterprise and the commercial bank.
- + If the contract does not specify the payment exchange rate, the enterprise records in the accounting books according to the following principle:

#### HAI AGROCHEM JOINT STOCK COMPANY

NOTES TO THE FINANCIALSTATEMENTS

28 Mac Dinh Chi, Da Kao Ward, District 1, Ho Chi Minh City, Viet Nam

Quarter I of 2025

The actual exchange rate for recognizing receivables: it is the buying exchange rate of the commercial bank where the enterprise instructs the customer to make the payment at the time the transaction occurs.

The actual exchange rate for recognizing payables: it is the selling exchange rate of the commercial bank where the enterprise plans to conduct the transaction at the time the transaction occurs.

For transactions involving the purchase of assets or expenses paid immediately in foreign currency, the actual exchange rate is the buying exchange rate of the commercial bank where the enterprise makes the payment.

- The actual exchange rate for revaluing foreign currency-denominated monetary items at the time of preparing the financial statements: It is the exchange rate announced by the commercial bank with which the enterprise regularly transacts, according to the following principle:
- + The actual transaction exchange rate used to revalue monetary items denominated in foreign currencies classified as assets is the buying rate of the commercial bank where the company frequently conducts transactions at the time of preparing the financial statements. For foreign currency deposits at banks, the actual exchange rate used for revaluation is the buying rate of the specific bank where the company holds its foreign currency account.
- + The actual exchange rate for revaluing foreign currency-denominated monetary items classified as payables: It is the selling exchange rate of the commercial bank at the time of preparing the financial statements.

#### 4.1. Exchange rates used in accounting (continued)

- b. Principles for determining the exchange rate for recording: The exchange rate for recording includes the actual exchange rate for specific transactions or the moving weighted average exchange rate.
- The actual exchange rate for specific transactions: It is the exchange rate used when collecting receivables, paying deposits or securities, or settling payables in foreign currency. This rate is determined based on the exchange rate at the time the transaction occurs or at the end-of-period revaluation for each item.
- The moving weighted average exchange rate: This rate is used for crediting the cash account when making payments in foreign currency. It is calculated by dividing the total amount reflected in the debit side of the cash account by the actual foreign currency available at the time of payment

#### c. Principles for applying exchange rates in accounting:

- When foreign currency transactions occur, the actual exchange rate at the time of the transaction is used to convert amounts into the accounting currency for:
- + Accounts reflecting revenue and other income. Specifically, in the case of sales of goods, provision of services, or income related to advance revenues or advance transactions with buyers, the corresponding revenue or income for the amount received in advance is converted using the exchange rate at the time the buyer makes the advance payment.

- + Accounts reflecting production costs, business expenses, and other expenses. Specifically, in the case of allocating prepaid expenses to production or business costs during the period, the expense is recorded using the actual exchange rate at the time the prepayment occurs.
- + Accounts reflecting assets. Specifically, for assets purchased in advance, the value of the asset corresponding to the prepayment is converted using the actual exchange rate at the time the advance payment is made to the seller.
- + Shareholder equity accounts.
- + Debit entries in receivable accounts; debit entries in monetary accounts; debit entries in payable accounts when prepayments are made to the seller.
- + Credit entries in payable accounts; credit entries in receivable accounts when the buyer makes an advance payment.
- When foreign currency transactions occur, the actual exchange rate for specific transactions is used to convert amounts into the accounting currency for the following types of accounts:
- + Credit entries in receivable accounts (excluding cases of prepayments from the buyer); Debit entries in receivable accounts when prepayment from the buyer is settled after transferring products, goods, fixed assets (TSCĐ), providing services, or when the quantity is accepted; Credit entries in pledged, escrow accounts, and prepaid expenses.
- + Debit entries in payable accounts (excluding prepayments to the seller); Credit entries in payable accounts when the prepayment to the seller is settled after receiving products, goods, fixed assets (TSCĐ), services, or when the quantity is accepted.
- + In cases where multiple foreign currency receivables or payables occur during the period with the same counterpart, the actual exchange rate for specific transactions for each item is determined based on the moving weighted average exchange rate of transactions with that counterpart.
- + When making payments in foreign currency, the moving weighted average exchange rate is used to convert amounts into the accounting currency for credit entries in cash accounts.

#### 4.2. Principles for recognizing cash and cash equivalents

Cash and cash equivalents include cash on hand, bank deposits, deposits, short-term investments, or investments with high liquidity. High liquidity investments are those that can be easily converted into known amounts of cash and carry little risk of fluctuations in value upon conversion.

#### 4.3 Trade receivables and other receivables

Receivables are presented on the financial statements at the carrying amount of receivables from customers and other receivables after deducting provisions for doubtful debts.

- Receivables with a maturity of no more than 12 months or within a normal operating cycle from the reporting date are classified as current assets.

### HAI AGROCHEM JOINT STOCK COMPANY NOTES TO THE FINANCIALSTATEMENTS Representation of the property of the prop

- Items that are not classified as short-term are reclassified as long-term.

The Company's provision for doubtful debts is established in accordance with current accounting regulations. Accordingly, the Company is allowed to create provisions for doubtful debts for receivables that have been overdue for 6 months or more, or receivables that are unlikely to be paid due to liquidation, bankruptcy, or other similar difficulties. The provision for doubtful debts is created for each individual receivable based on the provisions outlined in Circular No. 48/2019/TT-BTC issued by the Ministry of Finance on August 8, 2019. Increases or decreases in the provision account balance are recorded as management expenses for the year.

#### 4.4 Inventories

Inventories are determined based on the lower of cost and net realizable value. The cost of inventories includes direct material costs, direct labor costs, and production overhead costs (if any) incurred to bring the inventory to its current location and condition.

Net realizable value is determined as the estimated selling price less estimated costs to complete the product, along with any marketing, selling, and distribution expenses incurred.

The Company applies the periodic method to account for inventories with the value determined as follows:

Method to determine the value of ending inventories: Weighted average cost.

Method of inventory accounting: Periodic system.

#### Provision for inventory devaluation:

The provision for inventory devaluation is made at the time of preparing the financial statements as the difference between the cost of inventories and their net realizable value. Increases or decreases in the provision for inventory devaluation are recorded as part of the cost of goods sold.

#### 4.5 Prepaid expenses

Prepaid expenses include short-term or long-term prepaid expenses on the balance sheet and are allocated over the period corresponding to the benefits derived from these expenses.

#### 4.6 Tangible fixed assets, intangible assets, and finance leases

Assets recognized as fixed assets must meet all four (4) of the following recognition criteria:

- (1) There is a certainty that economic benefits will be obtained from the use of the asset in the future:
- (2) The asset's cost must be reliably measured;
- (3) The estimated useful life is over one year;
- (4) The asset meets the value criteria set by current regulations (valued at 30,000,000 VND or more).

### HAI AGROCHEM JOINT STOCK COMPANY NOTES TO THE FINANCIALSTATEMENTS Reflection of the property of the property

Fixed assets are recorded at cost less accumulated depreciation.

The cost of newly purchased fixed assets includes the purchase price and all other directly related costs incurred to bring the asset to its ready-to-use state. The cost of tangible fixed assets constructed by contractors includes the value of completed works handed over and other directly related costs. The cost of tangible fixed assets self-constructed includes construction costs, actual production costs, installation costs, testing costs, and other related costs.

For fixed assets transferred from construction investment projects completed in the year but not yet approved for settlement, the increase in the fixed asset's value is the investment cost incurred up to the transfer date. When the project's settlement is approved, the cost of the fixed asset will be adjusted according to the settlement value.

#### 4.7 Depreciation and Amortization

Fixed assets are depreciated using the straight-line method based on their estimated useful life, in accordance with the depreciation rates specified in Circular No. 200/2014/TT-BTC dated December 22, 2014, and Circular No. 45/2013/TT-BTC dated April 25, 2013, as amended by Circular No. 147/2016/TT-BTC dated October 13, 2016, and Circular No. 28/2017/TT-BTC of the Ministry of Finance, as follows:

Asset Type	Depreciation Period
Buildings and structures	06 - 50 year
Machinery and equipment	03 - 12 year
Vehicles	06 - 10 year
Management tools and equipment	03 - 10 year
Other assets	03 - 05 year
Intangible assets	03 - 50 year

#### 4.8 Construction in progress

Construction in progress includes fixed assets that are being purchased and constructed but are not yet completed as of the end of the accounting period, and are recognized at cost. This includes construction costs, equipment installation costs, and other direct costs. These costs will only be depreciated when the assets are completed and put into use.

#### 4.9 Accounting principles for contracts and joint ventures

Business cooperation contracts can be executed in the form of jointly constructing assets or cooperating in certain business activities. The participating parties may agree to share revenue, products, or post-tax profits.

In all cases, when receiving funds or assets from other parties for the joint business activity, the receiving party must account for it as a liability, not as equity.

### HAI AGROCHEM JOINT STOCK COMPANY NOTES TO THE FINANCIALSTATEMENTS 28 Mac Dinh Chi, Da Kao Ward, District 1, Ho Chi Minh City, Viet Nam Quarter I of 2025

For joint venture contracts in the form of jointly controlled assets, each participating party will receive products or revenue from the use and exploitation of the jointly controlled assets and bear a portion of the costs incurred as agreed in the contract.

For joint venture contracts in the form of jointly controlled business operations, each party that incurs costs for specific activities will bear the corresponding expenses. For shared costs (if any), they will be allocated among the parties according to the terms in the contract.

#### 4.10 Recognition principles for financial investments

Short-term financial investments: These include bank deposits with maturity periods, loans held until maturity, and other investments with a remaining term of no more than 12 months from the reporting date, recognized at cost.

Long-term financial investments: These include investments in subsidiaries, joint ventures, and other long-term investments. They are recognized at cost, starting from the date of capital contribution or the purchase of bonds.

#### Method for provisioning short-term and long-term investment devaluation:

The provisioning for short-term and long-term investment devaluation is applied in accordance with the guidelines set forth in Circular No. 228/2009/TT-BTC dated December 07, 2009, Circular No. 89/2013/TT-BTC dated June 28, 2013, and Circular No. 48/2019/TT-BTC dated August 08, 2019, issued by the Ministry of Finance.

#### 4.11 Accounts payable and accrued expenses

Accounts payable and accrued expenses are recognized for amounts payable in the future related to goods and services received, regardless of whether the company has received an invoice from the supplier.

Accounts payable are tracked in detail by payment term, payee, and the currency payable. Accounts payable to vendors include amounts owed from commercial transactions arising from buying and selling. Accounts payable are classified as short-term and long-term on the financial statements based on the remaining payment term as of the reporting date.

#### 4.12 Recognition of loans and financial lease liabilities

Loans and financial lease liabilities with repayment terms over 12 months from the reporting date are classified as long-term loans and liabilities. Amounts due within 12 months from the reporting date are classified as short-term loans and liabilities for repayment planning.

Directly related costs to loans are accounted for as financial expenses. If these costs arise from loans specifically for investment, construction, or production of construction-in-progress assets, they are capitalized.

For financial lease liabilities, the total lease liability reflects the present value of minimum lease payments or the fair value of the leased asset.

#### 4.13 Recognition and capitalization of borrowing costs

The company applies the accounting policy for borrowing costs as per Accounting Standard No. 16 on Borrowing Costs, as follows:

Borrowing costs directly related to the investment in construction or production of construction-inprogress assets are capitalized into the value of the asset, including interest on loans, amortization of discounts or premiums on bond issuance, and other related borrowing costs.

Capitalization of borrowing costs will be suspended during periods when the construction or production of construction-in-progress assets is interrupted, unless the interruption is necessary.

Capitalization of borrowing costs ends when the essential activities required to prepare the asset for use or sale have been completed. Borrowing costs incurred after this will be recognized as production or business expenses in the year incurred.

Income arising from temporary investment of loans while waiting to use them for obtaining construction-in-progress assets must be deducted from capitalized borrowing costs.

The borrowing costs capitalized during the year must not exceed the total borrowing costs incurred during the year. The interest expenses and the amortized discount or premium capitalized each year must not exceed the actual interest expenses and the amortized discount or premium for that year.

#### 4.14 Principles for recognizing owners' equity

Owner's investment capital includes:

- + Initial capital contributions and additional contributions from the owners.
- + Amounts supplemented from the equity funds, profits after tax from business operations.

The surplus capital stock is recognized according to the difference between the actual issuance price and the par value of shares when shares are issued.

Foreign exchange differences are immediately reflected in financial revenue (if a gain) or financial expenses (if a loss) at the time of occurrence.

#### 4.14 Principles for recognizing owners' equity (Continued)

Treasury shares are recognized at the actual repurchase price, including the purchase price and any direct costs related to the repurchase of shares.

Principles for setting up funds from post-tax profits: The establishment of funds from post-tax profits is carried out according to the Company's charter and the resolutions of the Company's General Assembly of Members.

#### 4.15 Recognition of revenue, financial revenue, and other income

Revenue from the sale of goods is recognized when it satisfies the following conditions:

### HAI AGROCHEM JOINT STOCK COMPANY NOTES TO THE FINANCIALSTATEMENTS 28 Mac Dinh Chi, Da Kao Ward, District 1, Ho Chi Minh City, Viet Nam Quarter I of 2025

Most of the risks and rewards related to the ownership of the product or goods have been transferred to the buyer.

Revenue is relatively certain. When entering into a contract where the buyer has the right to return the purchased product or goods under specific conditions, the company can only recognize revenue when those specific conditions no longer exist and the buyer no longer has the right to return the product or goods.

The company no longer retains control over the goods as the owner or has control over the goods.

The company has received or will receive economic benefits from the sales transaction.

The costs related to the sales transaction can be determined.

#### Revenue from service provision is recognized when the following conditions are met:

Revenue from a service transaction is recognized when the result of that transaction can be reliably determined. In cases where the service is performed over multiple periods, revenue is recognized in the period based on the work completed as of the end of the financial year. The result of the service provision transaction is determined when all of the following conditions are satisfied:

- Revenue can be reliably determined.
- There is a possibility of receiving economic benefits from the service transaction.
- The portion of the work completed by the end of the financial year can be determined.
- The costs incurred for the transaction and the costs to complete the service provision can be identified.

#### Revenue reductions

This account is used to reflect reductions in revenue from the sale of goods and service provision arising during the period, including: trade discounts, sales returns, and reductions in the price of goods sold. This account does not reflect taxes deducted from revenue, such as output VAT payable calculated under the direct method.

#### Financial revenue

Income from interest is recognized based on the rate corresponding to the time period, using the principal balance and applicable interest rate.

#### Other income

Other income refers to income that is unusual and outside the scope of business activities, either registered or permitted by the company.

#### 4.16 Accounting principles for cost of goods sold and services rendered

The cost of goods sold reflects the value of products, goods, services, and investment real estate sold during the year. Additionally, it includes costs related to the business of investment real estate, such as depreciation, repair costs, operating lease expenses for investment properties, costs of sales, and liquidation of investment properties.

## HAI AGROCHEM JOINT STOCK COMPANY NOTES TO THE FINANCIALSTATEMENTS 28 Mac Dinh Chi, Da Kao Ward, District 1, Ho Chi Minh City, Viet Nam Quarter I of 2025

Provisions for inventory write-downs are included in the cost of goods sold based on the inventory levels and the difference between the net realizable value being lower than the cost of the inventory.

Costs of raw materials, labor exceeding normal levels, and fixed production overheads that cannot be allocated are included in the cost of goods sold for the year.

Import taxes, special consumption taxes, and environmental protection taxes that have been included in the purchase price of goods, if refunded upon sale, should be deducted from the cost of goods sold.

#### 4.17 Financial and other expenses

#### Financial expenses

Financial expenses include costs related to financial investment activities, borrowing and lending costs, contributions to joint ventures, losses from the sale of short-term securities, securities transaction costs, provision for impairment of trading securities, provision for loss on investments in other entities, foreign currency exchange losses, and exchange rate losses. Reversals of provisions for impairment of trading securities and provisions for loss on investments in other entities are deducted from financial expenses.

#### Other expenses

Other expenses are costs incurred due to events or transactions that are separate from the regular operations of the business.

#### 4.18 Accounting principles for selling expenses

Selling expenses of a business are the actual costs incurred during the process of selling products, goods, or providing services. These include costs for marketing, product promotion, advertising, sales commissions, warranty expenses for products and goods, storage, packaging, and transportation costs.

Reversals of warranty provisions for products or goods (the difference between the provision required this year being less than the unused provision from the previous year) should be deducted from selling expenses.

#### 4.19 Accounting principles for business management expenses

Business management expenses include wages and wage-related provisions for management staff, office material costs, tool and equipment costs, depreciation of fixed assets used for business management, land rent, business license tax, provisions for doubtful debts, outsourced services, and other monetary expenses.

Reversals of provisions for doubtful debts and provisions for payable accounts (the difference between the provision required this year being less than the unused provision from the previous year) should be deducted from business management expenses.

#### HAI AGROCHEM JOINT STOCK COMPANY

NOTES TO THE FINANCIAL STATEMENTS

28 Mac Dinh Chi, Da Kao Ward, District 1, Ho Chi Minh City. Viet Nam

Quarter I of 2025

#### 4.20 Taxes

VAT accounting is done separately for deductible input VAT and non-deductible input VAT. If this is not possible, the non-deductible VAT is accounted for in account 133. At the end of the year, the company determines the deductible VAT and non-deductible VAT in accordance with VAT laws.

Non-deductible input VAT is included in the value of the purchased asset, the cost of sold goods, or production and business expenses, depending on the specific case.

VAT payable includes: VAT payable on imported goods and VAT payable on goods and services sold, after deducting the deductible input VAT during the fiscal year.

Corporate Income Tax (CIT): CIT is a direct tax calculated on the business results after determining taxable income by subtracting deductible expenses from total revenues and income. This is tracked in the CIT account, reflecting the corporate income tax payable, paid, and yet to be paid to the State Budget.

Export tax is an indirect tax and is not included in the revenue structure of the business. When exporting goods, the business must separate the export tax payable from sales revenue. If it is not possible to separate the export tax at the time of revenue recognition, the revenue is recorded including the tax but periodically, the export tax payable should be deducted from the

### 4.21 Principles and methods for recognizing current corporate income tax expense and deferred corporate income tax expense

Current corporate income tax expense is determined based on the total taxable income and the corporate income tax rate for the current year.

Deferred corporate income tax expense is the amount of corporate income tax that will be payable in the future, arising from:

- Recognition of deferred income tax payable in the current year.
- Reversal of deferred income tax assets previously recognized from previous years.

The determination of the company's income tax is based on prevailing tax regulations. However, these regulations change over time, and the final determination of corporate income tax depends on the results of audits conducted by the competent authorities.

#### 4.22. Method for preparing consolidated Financial statements

#### Consolidated Balance sheet

The consolidated balance sheet is prepared by consolidating the balance sheets of the parent company and its subsidiaries on an item-by-item basis by aggregating equivalent items of assets, liabilities, and equity according to the following principles:

- Items that do not require adjustments are aggregated directly to determine the corresponding item in the consolidated balance sheet.

### HAI AGROCHEM JOINT STOCK COMPANY NOTES TO THE FINANCIAL STATEMENTS Representation of the property of the pro

- Items requiring adjustments are first adjusted before being aggregated for consolidation and presented in the consolidated balance sheet. The adjusted items related to the consolidated balance sheet include:
- + Investments of the parent company in its subsidiaries;
- + Non-controlling interests;
- + Intercompany receivables and payables between the parent company and its subsidiaries;
- + Unrealized gains and losses from internal transactions.

#### Consolidated Income statement

The consolidated income statement is prepared by consolidating the income statements of the parent company and its subsidiaries on an item-by-item basis by aggregating equivalent items according to the following principles:

- Items that do not require adjustments are aggregated directly to determine the corresponding item in the consolidated income statement.
- Items requiring adjustments are first adjusted before being aggregated for consolidation and presented in the consolidated income statement. The adjusted items related to the consolidated income statement include:
- + Revenue and cost of goods sold from transactions between the parent company and its subsidiaries;
- + Financial income and financial expenses from transactions between the parent company and its subsidiaries:
- + Non-controlling interests in net profit after corporate income tax;
- + Unrealized gains and losses from internal transactions between the parent company and its subsidiaries.

#### VII. OTHER INFORMATION

#### 1. Financial instruments

- 1.1 Capital risk management: The Company manages its capital resources to ensure that it can both operate effectively and maximize shareholder value through efficient capital utilization.
- 1.2 Financial Assets: Financial assets are assets through which the Company can generate future income. These assets have been revalued at fair value as of the date of the Financial Statements:

Item	ENDING BALANCE	BEGINNING BALANCE
- Cash and Cash equivalents	5,049,475,015	4,691,631,736
- Trade receivable and other receivables	960,244,521,171	962,015,580,277
Total	965,293,996,186	966,707,212,013

1.3 Financial liabilities: Financial liabilities have been re-evaluated in accordance with applicable Accounting Standards to ensure the Company's payment obligations. Additionally, borrowing costs incurred during the period have been recognized in the Company's Income Statement:

Item	ENDING BALANCE	BEGINNING BALANCE
- Short-term and long-term borrowings	84,571,034,760	84,976,022,116
- Short-term trade payables	326,586,626,442	330,500,412,480
- Other payables	4,506,008,838	3,840,440,253
Total	415,663,670,040	419,316,874,849

#### 1.4 Financial Risk Management:

Financial risks include market risk, credit risk, liquidity risk, and cash flow risk. The Company does not implement risk hedging measures due to the absence of a domestic market for these instruments.

Market risk: The Company procures raw materials and goods from domestic suppliers to support its business operations. Therefore, the Company is exposed to risks related to changes in the prices of raw materials and goods. The Company manages this risk by sourcing from multiple suppliers across different locations, negotiating and adjusting selling prices flexibly, and employing various capital recovery measures.

Credit risk: Includes both liquidity risk and interest rate risk. The objective of liquidity risk management is to ensure sufficient funds are available to meet both current and future payment obligations. The Company's policy is to continuously monitor liquidity requirements for current and anticipated liabilities to maintain adequate cash reserves for both short-term and long-term liquidity needs.
